The OLE DB Driver for SQL Server is a stand-alone data access application programming interface (API), used for OLE DB. OLE DB Driver for SQL Server is available on Windows and delivers the SQL OLE DB driver in one dynamic-link library (DLL).

Download

The redistributable installer for Microsoft OLE DB Driver for SQL Server installs the client components required during run time to take advantage of newer SQL Server features. Starting with version 18.3, the installer also includes and installs the Microsoft Active Directory Authentication Library (ADAL.dll).

Microsoft OLE DB Driver 19.3.1 for SQL Server is the latest general availability (GA) version. The Microsoft OLE DB Driver 19 for SQL Server will install side by side with Microsoft OLE DB Driver 18 for SQL Server.

Note

Installation of the **Microsoft Visual C++ Redistributable** is a prerequisite, and while the x64 installer for Microsoft OLE DB Driver installs both the 64-bit and 32-bit driver, the x64 installer for the Microsoft Visual C++ Redistributable doesn't install 32-bit binaries. You must install both the x86 and x64 versions of the C++ redistributable package to use the OLE DB driver with 32-bit programs.
